Requirements

- *Sketch of Homepage*
 - Included in submission
- *Must have at least four pages, including a home page, a contact page, and two others:*
 - Includes home page, contact page, events page, and list of band members with images
 - All pages are on top navigation bar
- *Content must be “real” and realistic*
 - Text and images are realistic. Used generative AI for most of the text (Chat GPT)
- *At least 12 CSS style rules*
 - I used many more than that
- *A form*
 - On the contact page
- *A table*
 - On the events page
- *A list*
 - Tracklist on the home page
- *An external stylesheet*
 - styles.css
- *An internal stylesheet on at least one page*
 - There is one on all pages
- *Two images – one must be a background image.*
 - There are many images. Most are background images, all that stretch across the screen go up to 110k, those that don't I limited to 60k
- *At least two fixed page elements to make the site look consistent*
 - Included a header and a footer

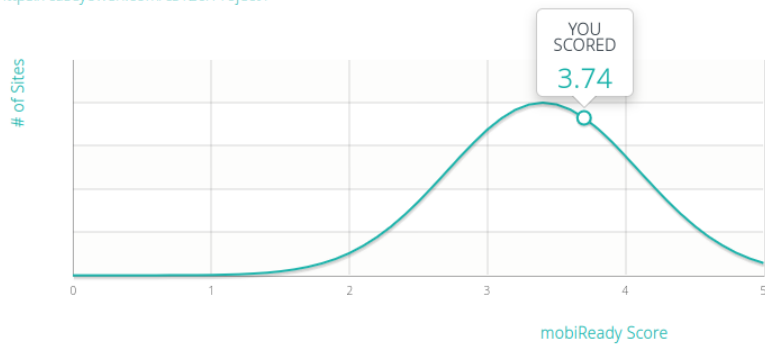

- *The site must be responsive and look good on a phone*
- Many media queries to do this – I think it is debatable that on mobile the header and footer take up too much room and would look better positioned relative – but I left them as fixed due to the assignment spec that they should be fixed.
- *Test the sites ability to be mobile-friendly*
 - I used mobiReady, and got a 3.74/5

How you Rank
